Team Name: holyC

Team Members: Auraud Zarafshar, Maddox Krape

1. GUI Mockup

This can be hand-drawn or designed in slides or drawIO - but paste a picture here. It should be clear how you will convey all of the required information and controls to the users.

Green = door open
Yellow = door closed
Blue = Offloading
Orange = boarding
Red = stop

2. Identify the ownership of each class:

Maddox classes: GUI, Building, Floor, Passengers, Elevator

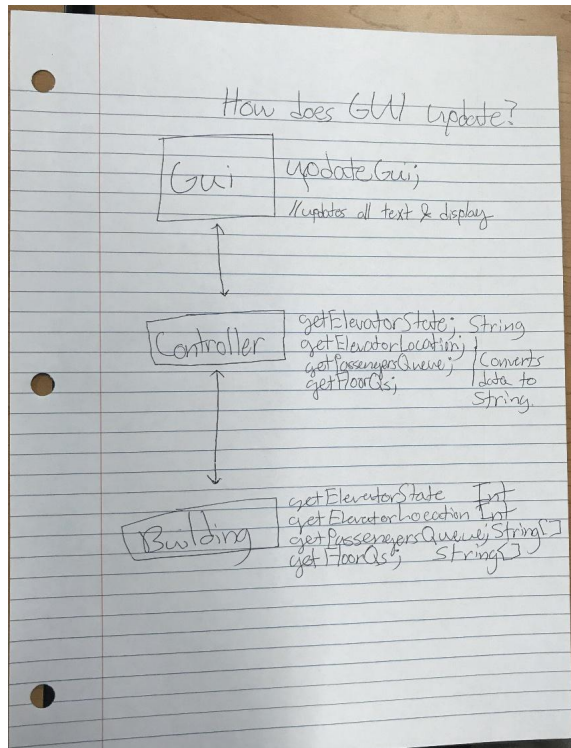

Auraud classes: Building, CallMgr, SimController

3. Identify (first pass) all of the externally visible methods (public and protected) *other than Getters/Setters* that you think you will need for each class.

This should be done as one section for each class and should look like this:

Class: GUI

- updateGui();

Class: Building

```
// Building() Constructor for building; initiates all variables
Public Building(int numFloors, int numElevators, String logfile);
// configElevators()
// addPassengersToQueue()
// checkPassengerQueue()
// updateElevator()
// updateFloors()
```

Class: Floor

```
// Floor() Constructor
// public Floor(int qSize)
// getter/setters
```

Class: Passengers

```
// Passengers() constructor
// add/remove passenger(direction)
```

```
//getters/setters
```

```
// high-level comment about what methodOne does (1 sentence)
<visibility> <type> methodOne(<type> param1, <type> param2, ...)
// high-level comment about what methodOne does (1 sentence)
<visibility> <type> methodTwo(<type> param1, <type> param2, ...)
```

```
Class: CallMgr:
    public CallManager(Floor[] floors, int numFloors);
    Passengers prioritizePassengerCalls(int floor)
// Getters and Setters
//updateCalls()
//calls per floor
//Calls per floor w/ direction
```

```
Class: Controller
stepSim() void
```

TODO:

Write method to updateFloorQs every tick

4. Project Management, Work Flow, Conflict Resolution, and Milestones

We will take advantage of the shared repository focusing on our dedicated classes. We will communicate regularly in and out of class to clarify and problem-solve. If there's a problem, we will communicate, and if stuck/can't resolve it, talk to the teacher.

Conflict Resolution:

- Try to only work on our own specified classes, as multiple people working on the same class cause merge errors.

Milestones:
